

ELECTIVE SURGERY CONSENT FORM (FELINE)

Patient _____ Owner _____ Date _____

Prior to your pet’s admission to Brosville Animal Clinic for surgery there are several optional procedures that we need you to consider and make informed decisions about. We highly recommend these procedures for your pet but also understand that each family must do what is within their financial means and personal preference. Please feel free to contact us with questions about these procedures and to discuss your concerns prior to surgery.

Feline Leukemia/Feline Immunodeficiency Virus Testing – Your cat can be tested for both FeLV and FIV with one blood test. These are two viruses which are the leading causes of illness and death in cats. If your cat has never before been tested or is an “outside” cat we highly recommend this important diagnostic procedure prior to surgery. (cost \$41.17)

Accept _____ Decline _____

Feline Leukemia Testing – We can perform just the test for FeLV if requested. (cost \$18.00)

Accept _____ Decline _____

Pre-Anesthetic Chemistry Panel – To assess the function of your cat’s liver, kidneys, and blood glucose. (cost \$36.56)

Accept _____ Decline _____

Complete Blood Counts – Blood testing to evaluate your pet’s white cell count and red cell parameters. This test identifies pre-existing anemias and/or infections. (cost \$38.65)

Accept _____ Decline _____

If a growth is being removed would you like that growth to be sent to a pathologist for a biopsy report? (cost \$80-\$100.00)

Accept _____ Decline _____

Would you like your pet to receive an injection for post-surgical pain? (cost \$15.00)

Accept _____ Decline _____

Microchip – A microchip can be permanently placed beneath the skin of your pet while she/he is anesthetized to enable identification of your pet by animal caregivers in case your animal is ever lost or stolen. (cost \$48.69)

Accept _____ Decline _____

Signature of Owner/Agent _____
